

THE APP MOVED THE SCORE

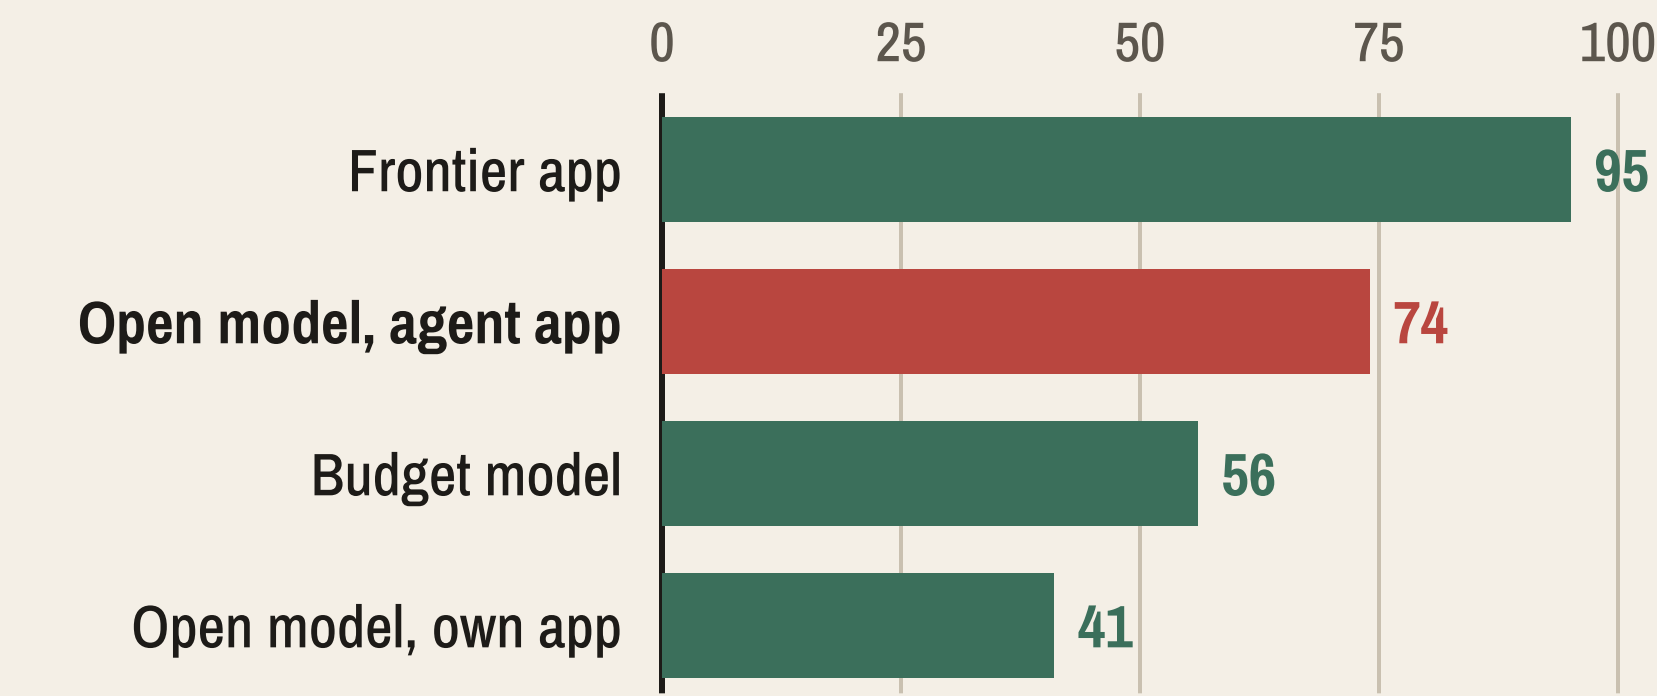

Five ways to get AI help, scored on what they get done for me, not on exam marks.

WHO GETS IT DONE

Frontier app leads with 95. The best setup in each round sets the scale.

Everyday AI Index score, 0–100, everyday profile

Not ranked yet, too little data: Local model.

WHERE THE POINTS COME FROM

A strong model in a weak app shows up as a high Model score and a low App score.

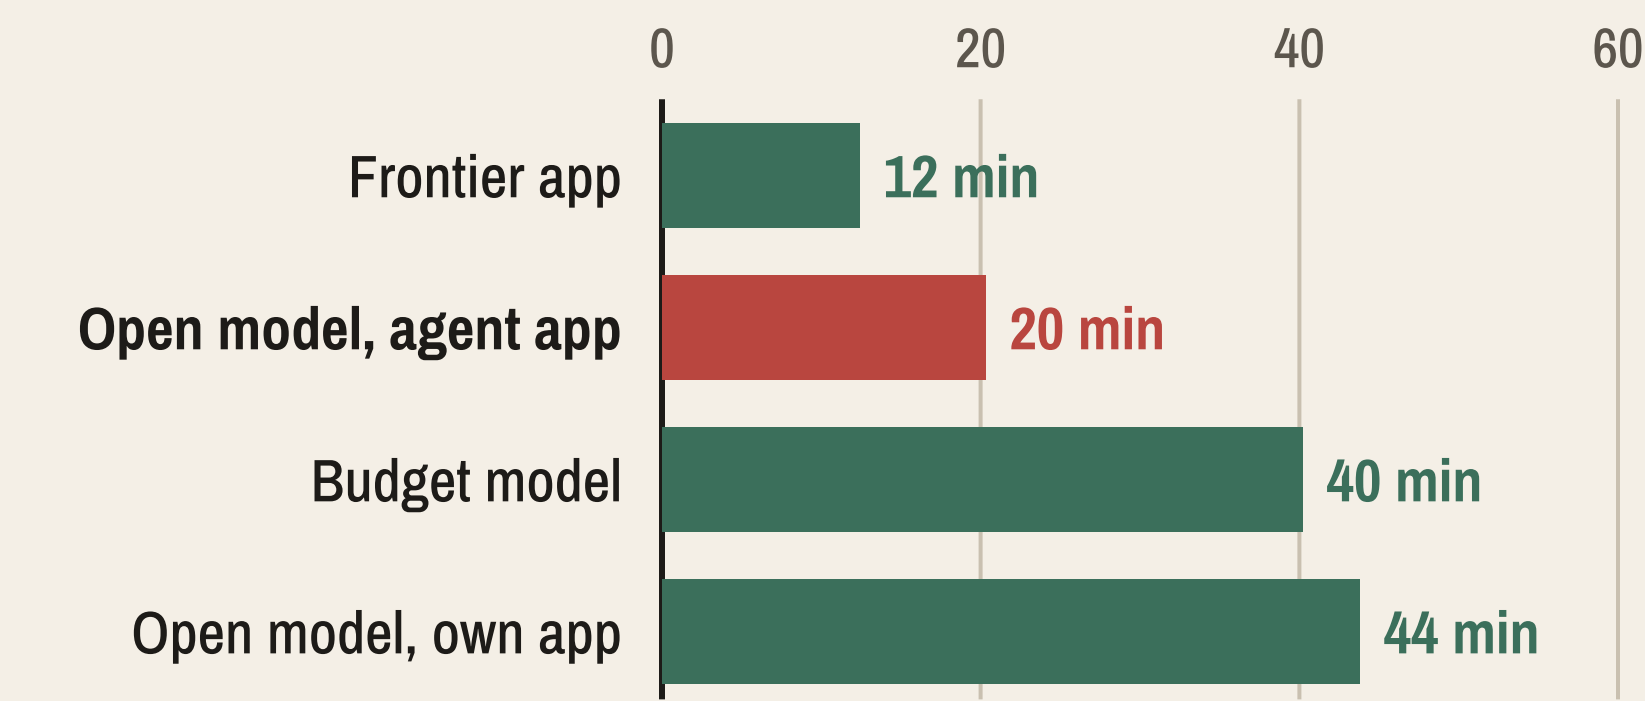

SETUP	MODEL	APP	TESTS	COST	GATES	TOTAL
Frontier app	100	100	100	46	–	95
Open model, agent app	84	77	72	50	–	74
Budget model	64	62	41	61	–	56
Open model, own app	84	44	40	85	×0.72	41
Local model *	63	27	–	100	–	50

Each column: 100 = best in this round. Gates cut the total for privacy, reliability or honesty problems. * Provisional: too little data yet.

MINUTES PER FINISHED TASK

My own time, prompting and fixing included.
Frontier app needed 12 minutes. Lower is better.

Minutes of my time per successful task, my 12-task battery

SAME MODEL, DIFFERENT APP

Two setups, one model. Their benchmark scores are identical, so the app made the difference.

SETUP	MODEL	APP	TESTS	TOTAL
Open model, agent app	84	77	72	74
Open model, own app	84	44	40	41

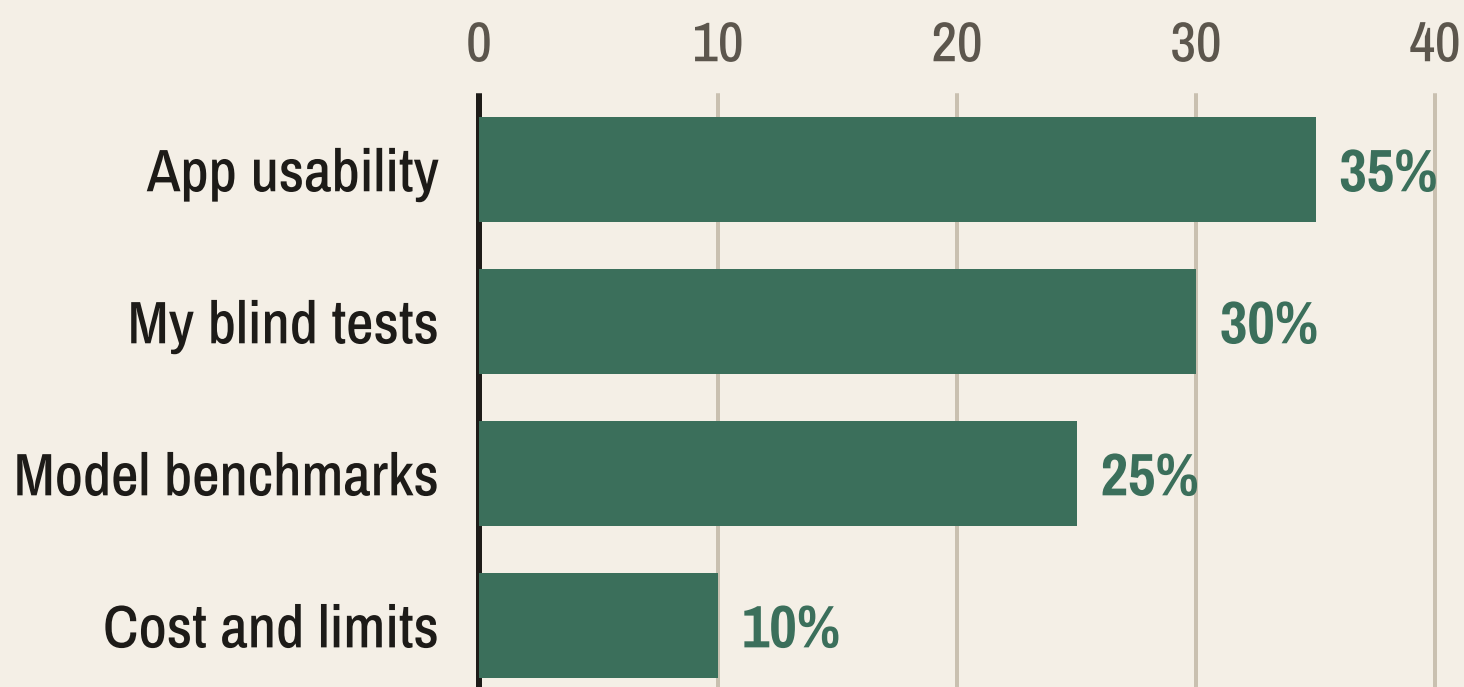

Same Model score. The app scored 77 against 44, and my own blind tests followed: 72 against 40.

FOUR LAYERS, ONE SCORE

Public benchmarks are only a quarter of it. The rest is the app, my own blind tests and the price.

Weight in the everyday profile, %

PICK THE APP, THEN THE MODEL

The same model scored 41 in one app and 74 in another. That gap is bigger than the gap between most models.
